PRESS RELEASE

FOR IMMEDIATE RELEASE:

PPM 2000 EXPANDS ITS PROFESSIONAL SERVICES DIVISION

Meeting the industry's growing need for consultants and trainers who specialize in Incident Reporting and Investigation Management.

Edmonton, Alberta, Canada—August 22, 2007—PPM 2000, a leading developer of Incident, Investigation and Case Management solutions for security, safety and risk management, announced the expansion of its Professional Services division to meet the growing need for consultants and trainers who specialize in Incident Reporting and Investigation Management.

PPM 2000's Professional Services division works with clients around the world—using their knowledge of risk management, security management, loss prevention and performance management—to provide high quality, subject matter expertise in the application of Incident and Investigation Management software. Combining their security management backgrounds with an intimate knowledge of PPM 2000 software, the consultants and trainers help each client select the most effective strategies and options for the customization and deployment of their Incident and Investigation Management system.

The latest member of PPM 2000's Professional Services division, Inspector (retd.) Bradley Siddell, currently heads the Intelligence Support Services (ISS) division of Trinus Technologies Inc., a PPM 2000 partner in visual analysis and business intelligence expertise. In one of his initial consulting and training projects with a major US pharmaceutical firm, attendees reported that "Brad was very knowledgeable and an excellent trainer". In turn, Brad had this to say about the project, "I enjoyed it for a number of reasons. As usual, the students were previously tied to law enforcement, intelligence or the military, so a natural bond was created. As well, they demonstrated a clear need for the technology, and I was able to deliver a viable solution. And, lastly, I enjoy teaching. Each time I am in a session, I learn more about clients' challenges and issues in the corporate security world."

Formerly the Director of National Security for the RCMP in the province of Alberta, Brad offers 25 years of decorated law enforcement, emergency operations, major crimes investigation, criminal intelligence, technical operations, analysis and national security experience. He has a passion for information and intelligence management strategies that incorporate technology and software, and he has a keen interest in training and teaching.

The expansion of PPM 2000's Professional Services division also includes the addition of Clint St. Jean as the company's Senior Consultant. With over ten years of experience in

corporate security, an intimate knowledge of PPM 2000's software applications and Board Certification in Security Management (the CPP designation), Clint epitomizes the high degree of expertise and experience required to become one of PPM 2000's consultants and trainers.

Yet another significant change propelled by the company's increased demand for consulting and training is the promotion of Dale Yushchyshyn, CPP, to Project Manager, Professional Services. In this pivotal role, Dale coordinates the group's diverse projects by scheduling resources and managing timelines to ensure that every project is delivered with the utmost professionalism and to the high standards expected by the company's clients.

When asked about his team, Brian McIlravey, CPP, PPM 2000's Vice-President of Business Development & Professional Services remarked, "There are many factors that set PPM 2000 apart from its competition, including superior product, company longevity and market penetration, but, by far, one of the most significant is the high caliber of our consulting and training personnel. They are a group of highly skilled security practitioners, proven leaders and subject matter experts in the world of Incident and Investigation Management. By combining a strong in-house team with an impressive group of contract consultants and trainers, we offer our clients the guidance and expertise they need for the successful implementation and deployment of their Incident Reporting and Investigation Management systems. PPM 2000 truly delivers software and services that are 'by security professionals for security professionals'."

About PPM 2000 Inc.:

PPM 2000 Inc. was established in 1988 to develop Incident Reporting and Investigation Management software for the corporate security industry.
