

PRESS RELEASE

FOR IMMEDIATE RELEASE

PPM 2000 FEATURES i2 TECHNOLOGY IN NEW VISUAL ANALYSIS TOOL
Investigative software solution maps relationships between incidents.

Edmonton, AB—August 1, 2006—PPM 2000, the leading developer of Incident and Investigation Management software, has released a **Visual Analysis Module for Perspective™**, their enterprise-level Incident Reporting application. This unique module integrates with Perspective to uncover the complex, and seemingly disparate, relationships hidden amidst hundreds... even thousands... of incidents, persons, vehicles and items.

Designed to bring clarity to complex investigations and scenarios, the Visual Analysis Module uses dynamic link analysis to transform routine data into visual elements that can easily be analyzed and interpreted. Its timeline feature offers the added ability to identify the precise sequence of case-related events.

Perspective's Visual Analysis Module features technology developed by i2, the world's leading provider of Visual Investigative Analysis software for law enforcement, intelligence, military and Fortune 500 organizations. As noted by PPM 2000's Vice-President of Consulting & Training, Brian McIlravey, CPP, "It's about helping investigators find that needle in the haystack. At the simplest level, it can be shown as links (similar to the spokes of a wheel) leading to one source, indicating that one person is involved in many incidents. Looking deeper, it can uncover seemingly disparate relationships, such as two suspects linked only through a third individual."

Denis' O'Sullivan, CPP, President & CEO of PPM 2000, added, "We elected to partner with i2 because of their innovative technology and strong commitment to their clients. In return,
